N°1

How to use and recover

To guarantee the integrity and stability of the drawing, Artgraf N°1 was developed to adhere and dry quickly, allowing continuity of the work even when wet surfaces are used.

Keep the packaging sealed so as to maintain constant humidity / Add water incrementally, based on how malleable you desire it, or if you notice the dough shows signs of excessive dryness / Complete state of dryness is reversible only with addition of water / treat as you would clay.

ARTGRAF®

DRAWING GRAPHITE PUTTY WATER-SOLUBLE

ArtGraf N°1 is a smooth, kneadable graphite putty that allows users to shape their own drawing tool based on their specific drawing needs.

Shape it into a large ball and create large swaths of color for larger drawings or mold it into a small shape for greater control.

ArtGraf N°1 creates a wide variety of shades and color contrasts by applying more or less material. It can be used directly from the package or mixed with water.

Available in 150gr Pouch Item No. 500150

Counter Display holds 12 putty pouches. Item No. 515AST (comes with 18 pouches)

A graphite fixative can be used, but is not essential since the ArtGraf N°1 properties already contain excellent fixative characteristics.

Unused portions of the putty should be sealed when not used. The original putty texture can be recovered by simply adding the necessary amount of water.

ART GRAF®

GRAPHITE POWDER WATER-SOLUBLE

Extremely versatile the water-soluble graphite powder ArtGraf from Viarco gives the artist the opportunity to explore new techniques and approaches with one of the most ancient and conventional raw materials used in fine art.

Naturally able to do the traditional shading, but with the added advantage of allowing the artist to work with water before, during or after the application.

Soluble and fixative properties are incorporated into the powder formulation, providing an endless array of greyscale colors from transparent to opaque simply by controlling the ratio of water and graphite.

The powder can be also mixed with other water-based painting materials, giving freedom to create new colours, tones and unique textures.

Available in 100gr bag Item No. 500946

250gr bag Item No. 500947

Display holds 8 / 100gr and 6 / 250gr bags Item No. 509AST
